When it comes to testing insurance systems, two qualifications are important above all others: technology expertise and insurance experience. You get both from us.

We test software thoroughly and in context. We can take the lead, if you like (as opposed to augmenting your staff). We can assess your environment. We can assess your functional requirements. We can develop specific testing plans based on your environment and your functional requirements. We can assure you that all of our testers are on-shore. Whatever we do, it will be at your direction, appropriate to your organization, in fulfillment of your objectives.

Because we're committed to customer service and communication, we'll work with you to determine your priorities and to establish our direction. Our Lead Testers will give you weekly status reports, lead weekly update calls, and be your liaisons throughout the engagement. And you'll see what you're getting for your money, as it happens.

Getting It Right the First Time

An old expression says, "There's never time to do it right. But there's always time to do it over." We don't subscribe to that notion. That's why, whether we're providing complete testing services — or conducting just a small testing project — we're always ready to test:

- Functionality
- User Experience
- Transactions
- Rates
- Rules
- Validation
- Billing
- Claims
- Printing
- Portals
- Mobile Interfaces.

Flexible Pricing

We know you could learn to test your own systems. But we'll lower your risk and spend less of your time and money. In fact, our pricing is determined by the amount of testing we perform. We'll give you cost-effective time and materials billing if you prefer not to sign a long-term commitment. And we'll give you discounted pricing for longer-term engagements. Either way, you'll get more than you bargain for — and better results than you might expect.

Why Marias?

If you recognize the value experienced objectivity can bring to your insurance operations, call us today. You'll be surprised at how responsive a real service organization can be.
